USER INTERFACE DESIGN

EXP.NO:08

REG.NO:230701235   DATE:27.04.2025

AIM:The aim is to create storyboards representing the user flow for a mobile app, such as a food delivery app, using Balsamiq.

STORYBOARD

The ZOMAYO app storyboard consists of three primary screens that guide the user from login to food ordering and delivery tracking. The first screen is the Login Page, where users are prompted to enter their username and password into text fields, followed by clicking the LOGIN button to access the app. This screen serves as the authentication gateway. Upon successful login, users are directed to the Home Page, which welcomes them with a "WELCOME!!" message and provides a search bar to find their favorite dishes. Below the search bar, popular food items such as Biryani (Rs 150) and Ice Cream (Rs 50) are displayed with corresponding images, allowing users to browse and select items. Once an order is placed, the user is taken to the Order Tracking Screen, where they can see a map showing the delivery route and status. A message indicates that the order is arriving in 20 minutes, and users have options to view driver details, call the driver, or send special instructions. This final screen ensures transparency and communication during the delivery process, offering a smooth and interactive user experience.

OUTPUT:

RESULT:

Storyboards created using Balsamiq clearly represent the user flow of a food delivery app, showcasing all key screens and interactions from searching restaurants to order confirmation.
